

## CLI's Hosted Management Console

MCDM is CLI's web based, remote management software designed to manage CLI's family of thin clients. Compatible with any HTML5 Browsers, this tool gives you the flexibility to manage your thin clients anytime, from anywhere. Inherently intuitive, MCDM offers management capabilities for all Android™, CLI LX3™ Linux, WES7 and W10 IoT based CLI devices.

## Easy to Manage

MCDM software enables you to configure, monitor, and manage CLI thin client devices. From the management console, you can easily apply your setup parameters, patch and manage all aspects of remote CLI devices ensuring peak user productivity.

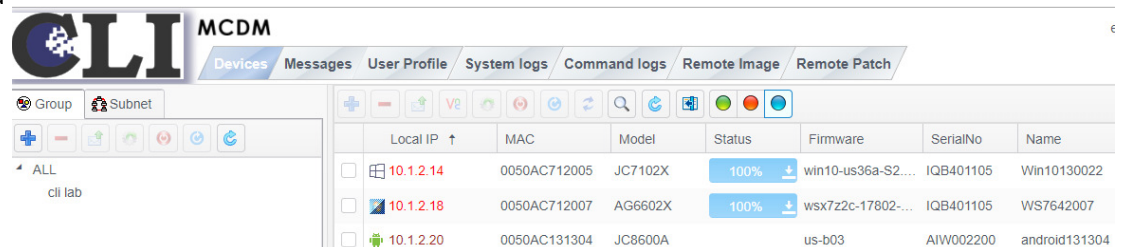

With its real-time reporting and alert capabilities, CLI's MCDM can provide new levels of insight into your deployed CLI devices and establish a single point of control.

# MCDM CLI Cloud Device Manager

CLI's web-based remote management software is designed to manage CLI thin clients. Using MCDM features, such as automatic check-in and group configuration will minimize time and effort, while maintaining individual users' hardware desktops. Each feature allows for the ease of management and deployment of desktop hardware.

## Device Discovery

The console allows system administrators to view details for each controlled device, organize device trees, create and maintain remote job definitions. All clients check in and their on-line or off-line status is displayed. A user menu in the left margin provides all the available management options.

## Remote Control

Remote problem trouble-shooting is greatly simplified, since devices can be remotely displayed with full keyboard and mouse control. MCDM allows IT system administrators to rapidly deploy, configure and maintain CLI thin client devices. After a device selection has been made, you have a complete snapshot of all the set up parameters for the device and a variety of remote control functions such as remote display, shutdown device, restart device and messaging. MCDM dramatically reduces deployment and ongoing support costs.

## Additional Features

MCDM provides IT Administrators visibility into firmware version, IP address, memory, device location and much more. With an integrated database, you have comprehensive asset tracking capabilities and management. This cloud based tool provides a purpose-built secure thin client management solution without a steep learning curve. Offering the scalability to fit your needs as well as a customizable GUI, you will have MCDM up and managing your CLI devices in no time.

## Licensing

Purchasing an MCDM license is simple. A one time fee paid per device at time of a thin client purchase. The benefits are access from anywhere and full remote control (on a mobile or fixed desktop device) using a browser. No software install is required. The following firmware images (or newer) currently support MCDM:

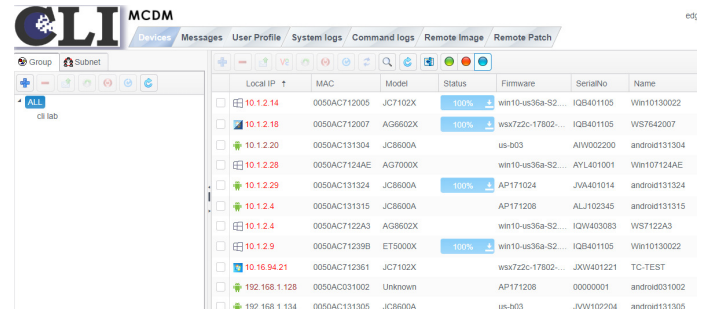

WES7- WES7Px64-171027-gold4

LX3-C171006-180119-gold2

Android-US-b01-silver1

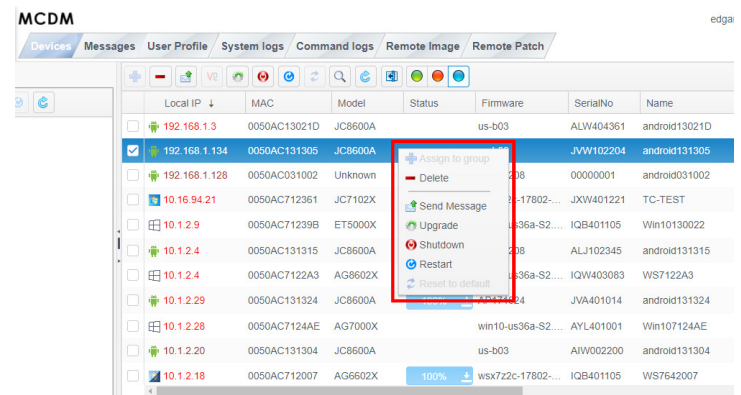

Win10- Win10-171027-gold2
